Background

Altair Computer Systems Limited is a privately owned New Zealand business that was established in 1996 in order to provide computer facilities management and outsourcing services.

The shareholders and directors are all employees working within the business on a day to day basis.

We have over 25 employees based in Auckland and Wellington, and provide support in 20 other locations throughout New Zealand.

Capabilities

We have grown our capabilities and service offerings to the point where we can now provide a complete range of Information Technology and Business Solutions from:

Consulting

We provide advisory and consultancy services to assist our customers in determining the technology infrastructure and business systems that are appropriate for their business needs and opportunities.

Implementation

We have the capability to provide the appropriate level and range of skills necessary to ensure a reliable and cost effective infrastructure and/or business systems implementation.

Operation & Support We provide a comprehensive range of operational and support services to our customers. Our Help Desk service provides support for hardware, software and business applications using remote control tools where appropriate to ensure fast and cost effective assistance when required.

Customers

Altair customers range in size from large multi-national organisations such as Chevron New Zealand with hundreds of end users and complex technical and business needs, through to small-medium companies who may have from 1 to 100 end users.

For some customers Altair effectively becomes their entire IT Department offering a complete service ranging from consultancy, infrastructure and business systems implementation and support and where appropriate systems development. For other customers we may be one part of their support team to bring specialist skills to complement their own internal team and other service providers.

We have experience dealing with issues that affect smaller customers (e.g. the desire for leading systems despite having limited budgets), as well as issues that are unique to larger multi-nationals (e.g. the desire for local needs to be met whilst meeting parent company corporate standards and guidelines).
